YASKAWA

Yaskawa AC Drive Option Heatsink External Mounting Kit Installation Manual

Type: ZPSA-GA50Vx-x

To properly use the product, read this manual thoroughly and retain for easy reference, inspection, and maintenance. Ensure the end user receives this manual.

◆ Applicable Documentation

| Document | Description |
|--|---|
| Yaskawa AC Drive Option Heatsink External Mounting Kit Installation Manual | Read this manual before you install the kit. The manual contains information about how to install the kit to put the heatsink external to the enclosure panel. |
| Yaskawa AC Drive Manuals | For information about drive settings, refer to the manuals for the drive on which you will use this kit. The manuals provide information about basic installation, wiring, operation procedures, functions, troubleshooting, and maintenance. The manuals also include important information about parameter settings and |
| | tuning the drive. You can download drive manuals from the Yaskawa product and technical information website shown on the back cover of this manual. |

2 General Safety

Supplemental Safety Information

▲ DANGER This signal word ide

This signal word identifies a hazard that will cause serious injury or death if you do not

A WARNING prevent it.

This signal word identifies a hazard that can cause death or serious injuries if you do not

▲ CAUTION

Identifies a hazardous situation, which, if not avoided, can cause minor or moderate injury.

NOTICE injury.

prevent it.

This signal word identifies a property damage message that is not related to personal

Section Safety

General Precautions

- Some figures in the instructions include options and drives without covers or safety shields to more clearly show the
 inside of the drive. Replace covers and shields before operation. Use options and drives only as specified by the
 instructions.
- · The figures in this manual are examples only. All figures do not apply to all products included in this manual.
- Yaskawa can change the products, specifications, and content of the instructions without notice to make the product and/or the instructions better.
- If you damage or lose these instructions, contact a Yaskawa representative or the nearest Yaskawa sales office on the
 rear cover of the manual, and tell them the document number on the front cover to order new copies.

A DANGER

Electrical Shock Hazard. Do not examine, connect, or disconnect wiring on an energized drive. Before servicing, disconnect all power to the equipment and wait for the time specified on the warning label at a minimum. The internal capacitor stays charged after the drive is de-energized. The charge indicator LED extinguishes when the DC bus voltage decreases below 50 Vdc. When all indicators are OFF, measure for dangerous voltages to make sure that the drive is safe. If you do work on the drive when it is energized, it will cause serious injury or death from electrical shock. The drive has internal capacitors that stay charged after you de-energize the drive.

▲ CAUTION

Burn Hazard. Do not touch a hot drive heatsink. De-energize the drive, wait for a minimum of 15 minutes, then make sure that the heatsink is cool before you replace the cooling fans. If you touch a hot drive heatsink, it can burn you.

AWARNINGElectrical Shock Hazard. Only let approved personnel install, wire, maintain, examine, replace parts, and repair the drive. If personnel are not approved, it can cause serious injury or death.

A WARNINGSudden Movement Hazard. Tighten the screws to the specified tightening torque. Incorrect tightening torques can cause damage to equipment and cause serious injury or death from falling equipment.

NOTICE When you touch the drive and circuit boards, make sure that you observe correct electrostatic discharge (ESD) procedures. If you do not follow procedures, it can cause ESD damage to the drive circuitry.

3 Overview

You can install the drive with the heatsink external to the enclosure panel. This installation method is "external heatsink installation". This kit uses brackets to do an external heatsink installation on IP20/UL Open Type drives. When you use this kit to install the drive with the heatsink external, the drive will release its heat external to the enclosure panel. This will let you install the drive in a smaller enclosure panel and prevent too much heat in the enclosure panel.

Compatible Products

This installation kit is compatible with these drives:

GA500

◆ Installation Environment

The installation environment is important for the lifespan of the product and to make sure that the drive performance is correct. Make sure that the installation environment agrees with these specifications.

| Environment | Conditions |
|-----------------------------------|---|
| Area of Use | Indoors |
| Power Supply | Overvoltage Category III (IEC60664) |
| Ambient Temperature Setting | IP20/UL Open Type: -10 °C to +50 °C (14 °F to 122 °F) External Heatsink Installation: -10 °C to +35 °C (14 °F to 95 °F) When you do an external heatsink installation and the ambient temperature exceeds 35 °C (95 °F), derate the output current. Drive reliability is better in environments where the temperature does not increase or decrease quickly. When installing the drive in an enclosure, use a cooling fan or air conditioner to keep the internal air temperature in the permitted range. Do not let the drive freeze. |
| Humidity | 95%RH or less Do not let condensation form on the drive. |

| Environment | Conditions |
|-----------------------------|---|
| Storage Temperature | -20 °C to +70 °C (-4 °F to +158 °F) (short-term temperature during transportation) |
| Surrounding Area | Pollution degree 2 or less (IEC 60664-1) Install the drive in an area without: Oil mist, corrosive or flammable gas, or dust Metal powder, oil, water, or other unwanted materials Radioactive or flammable materials. Harmful gas or fluids Salt Direct sunlight Keep wood and other flammable materials away from the drive. |
| Altitude | 1000 m (3281 ft) Maximum Note: Derate the output current by 1% for each 100 m (328 ft) to install the drive in altitudes between 1000 to 4000 m (3281 to 13123 ft). It is not necessary to derate the rated voltage in these conditions: Installing the drive at 2000 m (6562 ft) or lower Installing the drive between 2000 to 4000 m (6562 to 13123 ft) and grounding the neutral point on the power supply. Contact Yaskawa or your nearest sales representative when not grounding the neutral point. |
| Vibration | 10 Hz to 20 Hz: 1 G (9.8 m/s ² , 32.15 ft/s ²) 20 Hz to 55 Hz: 0.6 G (5.9 m/s ² , 19.36 ft/s ²) |
| Installation Orientation | Install the drive vertically for sufficient airflow to cool the drive. |

NOTICE

Do not put drive peripheral devices, transformers, or other electronics near the drive.

Shield the drive from electrical interference if components must be near the drive. Components near the drive can cause incorrect drive operation from electrical interference.

NOTICE

Do not let unwanted objects, for example metal shavings or wire clippings, fall into the drive during drive installation. Put a temporary cover over the drive during installation. Remove the temporary cover before start-up. Unwanted objects inside of the drive can cause damage to the drive.

Gasket and Sealant

If the environment around the heatsink does not meet the recommendations for the drive installation environment, install a gasket or apply sealant as shown in Figure 3.1 and Figure 3.2. Make sure that the drive is safe from unsatisfactory environmental conditions.

Use a gasket that is approximately 2 mm (0.08 in) thick and made from CR or an EPDM-based rubber sponge.

Yaskawa recommends these products or equivalents:

- Gasket: INOAC CORPORATION C-4205
- Sealant: Shin-Etsu Silicone KE-3494 from Shin-Etsu Chemical Co., Ltd.

Refer to Panel Cut-Out Dimensions on page 16 for the gasket dimensions.

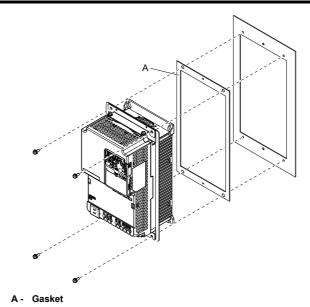

Figure 3.1 Install a Gasket

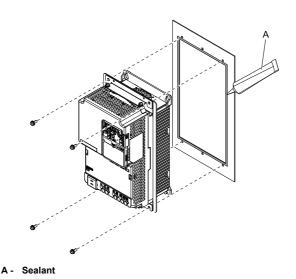

Figure 3.2 Apply Sealant

4 Receiving

1. Examine the products for damage.

- If there is damage to the products, contact the shipping company immediately. The Yaskawa warranty does not include damage from shipping.
- 2. Verify the product model number to make sure that you received the correct model. If you have problems with the products, contact the distributor where you purchased the products or the Yaskawa sales office immediately.

6 Install the Attachment

♦ Necessary Tools

To install the attachment, use Phillips screwdriver #2.

Kit Models and Installation Procedure

▲ CAUTION Crush Hazard. Tighten terminal cover screws and hold the case safely when you move the drive. If the drive or covers fall, it can cause moderate injury.

The installation procedure is different for different kit models. Refer to Table 6.1.

Table 6.1 Kit Installation Procedure

| | Drive Model | | Kit Model | | | |
|----------------------------|-----------------------------|----------------------------|---------------|-------------|------|--|

■ Install the Kit on Drive Models 2001 - 2006, B001 - B004 (Procedure A)

Cut an opening in the enclosure panel before you install the kit. Refer to *Panel Cut-Out Dimensions on page 16* for more information.

- 1. Use the supplied screws to attach bracket 1 on the drive. Tighten the screws to a correct tightening torque:
 - M4 \times 10 pan head screw: 0.98 N·m to 1.33 N·m (8.67 in·lb to 11.77 in·lb)

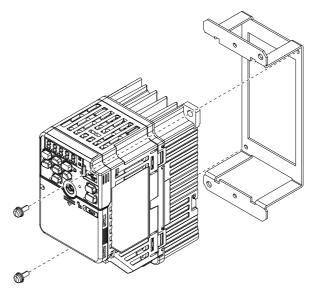

Figure 6.1 Attach Bracket 1

2. Use the supplied screws to install 2 each of bracket 2 in the positions shown in Figure 6.2.

Tighten the screws to a correct tightening torque:

• M4 \times 10 pan head screw: 0.98 N·m to 1.33 N·m (8.67 in·lb to 11.77 in·lb)

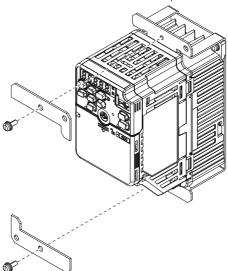

Figure 6.2 Install Bracket 2

 Install the drive in the cut opening of the enclosure panel and use screws to safety it to the enclosure panel.

Tighten the screws to a correct tightening torque:

• M4 × 10 pan head screw: 0.98 N·m to 1.33 N·m (8.67 in·lb to 11.77 in·lb)

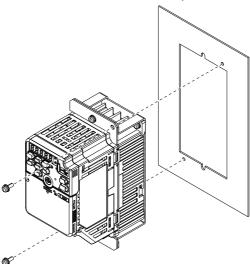

Figure 6.3 Install the Drive into the Opening of the Enclosure Panel

■ Install the Kit on Drive Models B006 and 4001 - 4004 (Procedure B)

Cut an opening in the enclosure panel before you install the kit. Refer to *Panel Cut-Out Dimensions on page 16* for more information.

 Use the supplied screws to install 2 each of bracket 1 in the positions shown in Figure 6.5.

Tighten the screws to a correct tightening torque:

• M4 × 10 pan head screw: 0.98 N·m to 1.33 N·m (8.67 in·lb to 11.77 in·lb)

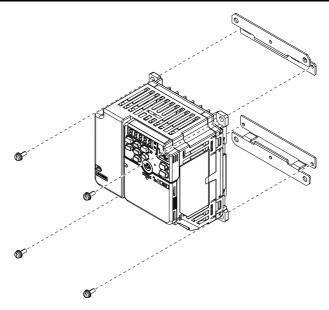

Figure 6.4 Install Bracket 1

2. Use the supplied screws to install 2 each of bracket 2 in the positions shown in Figure 6.5.

Tighten the screws to a correct tightening torque:

• M4 \times 10 pan head screw: 0.98 N·m to 1.33 N·m (8.67 in·lb to 11.77 in·lb)

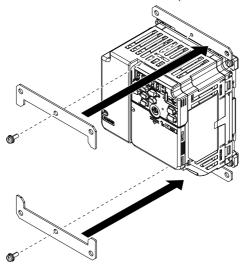

Figure 6.5 Install Bracket 2

 Install the drive in the cut opening of the enclosure panel and use screws to safety it to the enclosure panel.

Tighten the screws to a correct tightening torque:

M4 × 10 pan head screw: 0.98 N·m to 1.33 N·m (8.67 in·lb to 11.77 in·lb)

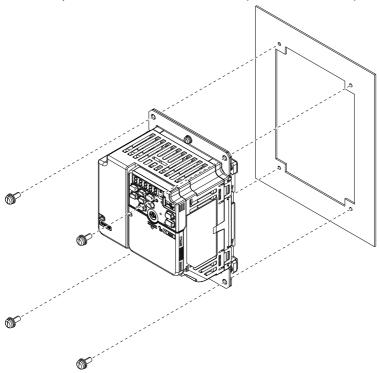

Figure 6.6 Install the Drive into the Opening of the Enclosure Panel

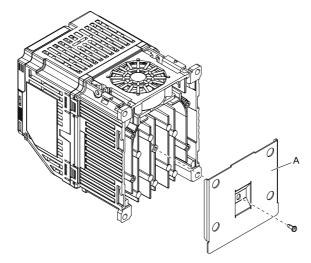

■ Install the Kit on Drive Models 2008 - 2021, B010 - B018, and 4005 - 4012 (Procedure C)

Cut an opening in the enclosure panel before you install the kit. Refer to *Panel Cut-Out Dimensions on page 16* for more information.

 Use the supplied screws to install the wind-tunnel panel in the position shown in Figure 6.7.

Tighten the screws to a correct tightening torque:

• 3 × 8 tapping screw: 0.98 to 1.33 N·m (8.67 to 11.77 in·lb)

A - Wind-Tunnel Panel

Figure 6.7 Attach the Wind-Tunnel Panel

Use the supplied screws to install bracket 1 to the top of the drive in the position shown in Figure 6.8.

Tighten the screws to a correct tightening torque:

• M4 \times 10 pan head screw: 0.98 N·m to 1.33 N·m (8.67 in·lb to 11.77 in·lb)

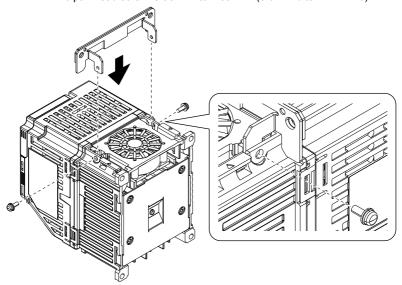

Figure 6.8 Install Bracket 1 (Top of the Drive)

3. Use the supplied screws to install bracket 1 to the bottom of the drive in the position shown in Figure 6.7.

Tighten the screws to a correct tightening torque:

• M4 × 10 pan head screw: 0.98 N·m to 1.33 N·m (8.67 in·lb to 11.77 in·lb)

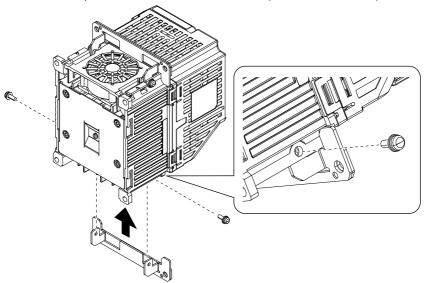

Figure 6.9 Install Bracket 1 (Bottom of the Drive)

26

4. Install the drive in the cut opening of the enclosure panel and use screws to safety it to the enclosure panel.

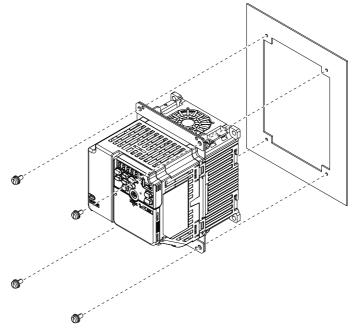

Figure 6.10 Install the Drive into the Opening of the Enclosure Panel

■ Install the Kit on Drive Models 2030 - 2056 and 4018 - 4038 (Procedure D)

Cut an opening in the enclosure panel before you install the kit. Refer to *Panel Cut-Out Dimensions on page 16* for more information.

 Use the supplied screws to install bracket 1 to the top of the drive in the position shown in Figure 6.11.

Tighten the screws to a correct tightening torque:

M5 × 12 pan head screw: 1.96 N·m to 2.53 N·m (17.35 in·lb to 22.39 in·lb)

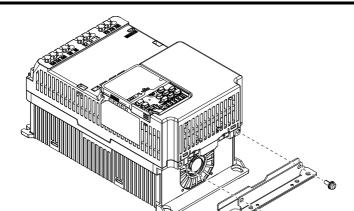

Figure 6.11 Install Bracket 1 (Top of the Drive)

Use the supplied screws to install bracket 2 to the bottom of the drive in the position shown in Figure 6.11.

Tighten the screws to a correct tightening torque:

M5 × 12 pan head screw: 1.96 N·m to 2.53 N·m (17.35 in·lb to 22.39 in·lb)

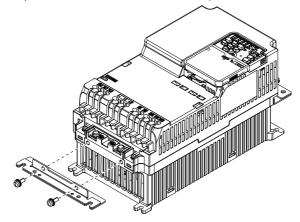

Figure 6.12 Install Bracket 2 (Bottom of the Drive)

- $\label{eq:continuous} 3. \quad \text{Attach the frame to the drive and use screws to safety it to the drive.}$
 - Tighten the screws to a correct tightening torque:
 - M4 × 10 pan head screw: 0.98 N·m to 1.33 N·m (8.67 in·lb to 11.77 in·lb)

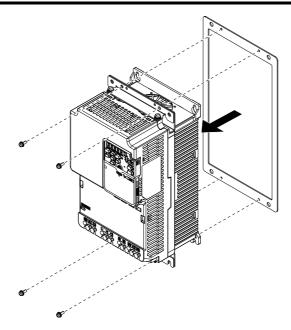

Figure 6.13 Install the Frame

4. Install the drive in the cut opening of the enclosure panel and use screws to safety it to the enclosure panel.

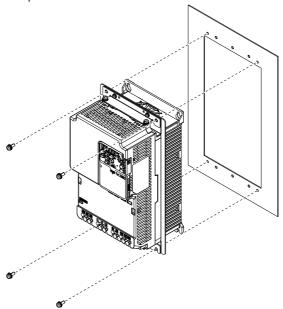

Figure 6.14 Install the Drive into the Opening of the Enclosure Panel

■ Install the Kit on Drive Models 2070, 2082, 4044, 4060 (Procedure E)

Cut an opening in the enclosure panel before you install the kit. Refer to *Panel Cut-Out Dimensions on page 16* for more information.

 Use the supplied screws to install bracket 1 to the top of the drive in the position shown in Figure 6.15.

Tighten the screws to a correct tightening torque:

M6 × 12 pan head screw: 3.92 N·m to 4.90 N·m (34.70 in·lb to 43.37 in·lb)

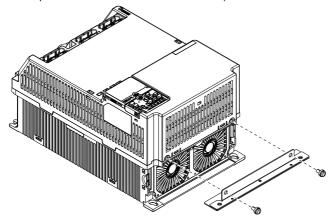

Figure 6.15 Install Bracket 1 (Top of the Drive)

 Use the supplied screws to install bracket 2 to the bottom of the drive in the position shown in Figure 6.15.

Tighten the screws to a correct tightening torque:

M6 × 12 pan head screw: 3.92 N·m to 4.90 N·m (34.70 in·lb to 43.37 in·lb)

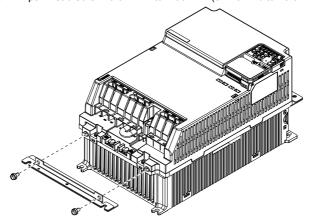

Figure 6.16 Install Bracket 2 (Bottom of the Drive)

3. Attach the frame to the drive and use screws to safety it to the drive. Tighten the screws to a correct tightening torque:

• M4 \times 12 pan head screw: 0.98 N·m to 1.33 N·m (8.67 in·lb to 11.77 in·lb)

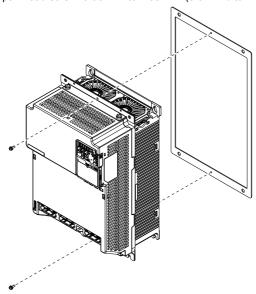

Figure 6.17 Install the Frame

4. Install the drive in the cut opening of the enclosure panel and use screws to safety it to the enclosure panel.

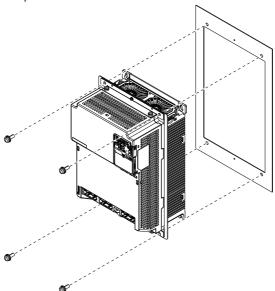

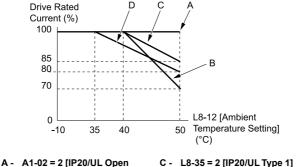

Figure 6.18 Install the Drive into the Opening of the Enclosure Panel

Related Parameters 7

When you attach the kit to the drive and do an External Heatsink Installation, set L8-35=3[Installation Method Selection = External Heatsink]. Refer to the drive manual for information about setting parameters.

| No. | Name | Description | Default (Range) |
|-------|-----------------------------------|---|----------------------------|
| L8-12 | Ambient Temperature Setting | Sets the ambient temperature of the drive installation area. The setting range changes when the <i>L8-35 [Installation Method Selection]</i> value changes: | 40 °C (-10 °C - +60 °C) |
| L8-35 | Installation Method Selection | Sets the type of drive installation. 0: IP20/UL Open Type 1: Side-by-Side Mounting 2: IP20/UL Type 1 3: External Heatsink | 0 (0 - 3) |

Type] B - L8-35 = 1 [Side-by-Side

Mounting

- D L8-35 = 3 [External Heatsink]
